The screenshot shows the HABBY 0.26 software interface. The window title is "HABBY 0.26 - DefaultProj". The menu bar includes "Projet", "Réglages", "Vue", and "Aide". The top navigation bar has tabs: "Projet", "Hydraulique", "Substrat" (which is selected), "Calc. Habitat", "Explorateur de données", "Outils", "ESTIMHAB", "STATHAB", and "FStress". On the left, there is a sidebar with icons for "Projet", "Hydraulique", "Substrat", "Calc. Habitat", "Explorateur de données", "Outils", "ESTIMHAB", "STATHAB", and "FStress". The main content area is titled "Substrate data". It shows "Substrate mapping method from" with three options: "polygons (.shp, .gpkg)" (selected), "points (.txt, .shp, .gpkg)", and "constant values (.txt)". Below this, under "Polygons", there are fields for "File (.shp, .gpkg)" (set to "baxter\_sub\_coarserdom\_cemagref.shp"), "Classification code" (set to "Cemagref"), "Classification method" (set to "coarser-dominant"), "Default values" (set to "4, 4"), "EPSG code" (set to "unknown"), and ".sub file name" (set to "baxter\_sub\_coarserdom\_cemagref.sub"). A "run" button is at the bottom right of this section. A progress bar shows "0/1". Below this, "Last file created" is listed as "sub\_durance\_PolygonSandrePercent.sub". A section titled "Merging of hydraulic and substrate data" follows. At the bottom, a "HABBY says:" box contains the following text:  
Hydraulic computing ...  
- baxter SS hotstart.hyd creation done (process time = 2 s).  
Hydraulic computing finished.  
Hydraulic computing ...  
- baxter SS hotstart.hyd creation done (process time = 2 s).  
Hydraulic computing finished.
